Data science has been called “the sexiest job of the 21st Century.” With a projected shortage of 140,000 to 190,000 people with deep analytical skills, as well as 1.5 million managers and analysts with the know-how to use the analysis of big data to make effective decisions, data science is a rapidly growing, high-paying field.

Enormous amounts of data are generated every day in a range of areas—social media, search engines, insurance companies, healthcare organizations, hospitals, defense, retail, and many others. Those trained to analyze, visualize, and report these data will add great value across a range of sectors.

Indiana University’s data science courses are taught by world class faculty and span a wide range of interdisciplinary fields.
